

Occasionally, something will knock a generator off line. You won't hear it run its weekly test, and of course it won't come on if you have emergency power needs. The fix could be as easy as resetting your generator. Identify your generator's controller by removing the cover and follow the appropriate directions below.

To reset the Briggs & Stratton controllers below, turn the unit **OFF**, wait **30 seconds**, then turn the unit back into **AUTO**

To reset the Briggs & Stratton controller below, press **STOP**, then press **up & down arrows at the same time**, then press **Auto/Manual**

Try to reset your generator by this method for up to three times. If your generator doesn't come back online, call us at
