

Occasionally, something will knock your generator off line. You won't hear it run its weekly test, and of course it won't come on if you have emergency power needs. The fix could be as easy as resetting your generator. Open the generator case and identify whether or not your generator has an ENTER button. Depending on whether or not your generator has an ENTER button, follow the appropriate directions below.

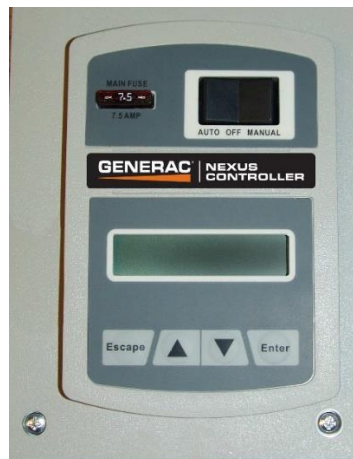

To reset a Generac Generator Controller *which does not have a button or toggle switch labelled ENTER*, turn the unit to **OFF**, wait **15 seconds**, then turn the unit back to **AUTO**

Samples of Generac Controllers WITHOUT "Enter" Button

To reset a Generac Generator Controller *which has a button or toggle switch labelled ENTER*, turn the unit to **OFF**, wait **15 seconds**, press **ENTER** then turn the unit back to **AUTO**
